SUMMARY

Frontend Engineer with 4+ years of experience building scalable, high-performance frontend systems across fintech, enterprise, and consumer products.

Strong focus on real-time systems, complex UI architecture, and zero-to-one product development. Deep technical expertise in building production-ready systems, with hands-on experience across the full frontend spectrum — from design systems and component architecture to creative development and advanced animations.

CORE SKILLS

Frontend:

React, TypeScript, Next.js, Remix, Vite

UI & Libraries:

TailwindCSS, Shadcn/UI, TanStack (Query, Table, Router)

State Management:

Redux, Zustand, Valtio

Architecture & Performance:

- Scalable frontend architecture
- Design systems & component-driven development
- Real-time UI systems
- Performance optimization for data-heavy applications

Creative Development:

- High-end landing pages with advanced animations
- Close collaboration with designers to deliver visually rich experiences

Backend / Supporting Stack:

NestJS, Hono

AI & Tooling:

Claude Code (AI agent-assisted development)

EXPERIENCE**EnhancedLab** — *Frontend Lead*

Feb 2025 – Nov 2025

Project: TheVapeLabs

- Sole frontend engineer responsible for all web products within the ecosystem
- Built DApp interfaces, sale pages, and marketing websites
- Designed scalable frontend architecture for multi-product system
- Delivered consistent UI/UX across product surfaces
- Acted as creative developer, collaborating with designers to build high-end animated landing pages

SyncX (Confidential) — *Frontend Lead*

Nov 2023 – Aug 2024

Project: Confidential – P2P Trading Platform

- Developed escrow-based transaction flows
- Designed UI for risk visibility and transparency
- Delivered stable and predictable trading experience

Project: Confidential – AI Agent Platform

- Built end-to-end agent configuration flows
- Implemented subscription and usage-based system
- Optimized UX for non-technical users

Project: Confidential – Trading Platform

- Architected frontend for real-time trading system
 - Built price charts, trading dashboards, and orderbook visualization
 - Implemented live trade updates and low-latency UI rendering
 - Developed accurate PnL / ROI calculation systems
-

Moonlab — Frontend Lead

Apr 2022 – Aug 2023

Project: Confidential – Web3 Client Platforms (200+ Projects)

- Delivered 200+ outsourced Web3 products for international clients
- Covered major product categories: DEX, CEX, launchpads, NFT marketplaces, and trading tools
- Built reusable frontend architectures to accelerate delivery across multiple projects
- Ensured consistent quality, performance, and production readiness at scale
- Acted as creative developer across projects, delivering high-end landing pages with rich animations

Project: Mcity

- Built interactive 3D DApps for metaverse environments
- Developed NFT marketplace features within 3D context
- Optimized rendering performance using Three.js and react-three-fiber
- Collaborated with designers to deliver immersive visual experiences

Project: RunTogether

- Built Move-to-Earn platform with DApp integration
- Developed NFT marketplace and user-facing dashboards
- Contributed to product achieving:
 - 7,413 assets sold in 30 minutes
 - 15,000+ downloads in 6 days
 - Top #2 on Google Play Vietnam

Project: Animverse

- Built DApps including NFT marketplace, IDO platform, and sale pages
- Designed scalable frontend systems for GameFi ecosystem
- Delivered animated, high-conversion landing pages in collaboration with design team

Additional Contributions:

- Defined frontend architecture and engineering standards across projects
 - Mentored junior engineers and interns → full-time conversion
-

Teracom — *Frontend Engineer (Intern → Junior)*

Jun 2021 – Apr 2022

Project: Government & Enterprise Systems

- Built CMS platforms and government portals
- Introduced SSR to improve SEO and performance

Project: Son La HPC

- Refactored large-scale frontend system
- Enhanced structure and code quality

Project: Vinh Tan TPC

- Migrated legacy system to Next.js + TypeScript
 - Improved performance and maintainability
-
